Semantic Web Services Processes Applications

semantic web services and processes: semantic composition ... - semantic web services are web services with a formal description (semantics) that can enable a better discovery, selection, composition, monitoring, and interoperability. processes are next steps to carrying out core business activities, such as e-commerce and e-services, and are created from the composition of web services or other components. **automated composition of semantic web services into ...** - research within the semantic web community proposes a top down unambiguos descrip-tion of web services capabilities, e.g., in standard languages like daml-s [2] and owl-s [10], thus enabling the possibility to reason about web services, and to automate web ser-vices tasks, like discovery and composition. however, the real taking up of semantic web **semantic web services, processes and applications** - semantic web services, processes and applications xi 10. references 158 designing semantic web processes: the wsdl-s approach 161 1. introduction 161 2. background 163 3. design semantic web process using wsdl-s 163 3.1 service annotation and publish using radiant 163 3.2 semantic discovery using lumina 166 3.3 process design using saros 169 4. **semantic web services for business processes management** - semantic web services for business processes ... semantic web services ©super 5/8/2007 semantic bpm tutorial, iciw 2007, mauritius, 13 may 2007 13 supporting business users better ©super 5/8/2007 semantic bpm tutorial, iciw 2007, mauritius, 13 may 2007 14 **web services to semantic web processes: investigating ...** - web services to semantic web processes: investigating synergy between practice and research keynote address the first european young researchers workshop on service oriented computing april 21-22 - 2005, leicester , u.k. amit sheth. lsdis lab, university of georgia . **some observations on semantic web service processes, tools ...** - web reasoners & languages [47], semantic web services, semantic web service processes and semantic web service composition has been performed. a briefing of these observations is as enumerated below. a. semantic web reasoning it has been found that various reasoning models and reasoners, based on the description logic [4], f-logic **semantic business process management: using semantic web ...** - of knowledge. semantic web services (sws) make use of semantic web technology to support the automated discovery, substitution, composition, and execution of software components, namely web services. our idea is to combine sws and bpm, and to develop one consolidated technology, which we call semantic business process management (sbpm). **semantic web services, processes and applications** - web, and the final part documents the evolution of web services towards semantic web services. similarly to cardoso & sheth's edition, liyang yu's book is intended for developers, graduate and post-graduate students, and researchers, being of interest to communities involved in the application of semantic web services technology. **metadata and semantics for web services and processes** - there is much to be gained from adding semantics to web services. this chapter provides a review of current metadata standards for web services and explains the need for adding semantics to web services. it also gives an overview of our current work in the area of creating semantic web services and semantic web processes. the meteor- **semantic business process management: a vision towards ...** - positions web services and business processes as the basis for future application structures. semantic web services: owl-s [11] is a comparatively narrow framework and ontology for adding semantics to web service descriptions. wsmf is a more comprehensive framework [12], which has been further developed to the web service modeling ontology (wsmo). **process mediation for semantic web services** - process mediation for semantic web services emilia cimpian semantic technology institute innsbruck emiliampian@sti2 1 research problem it is a common scenario for the business environment that one process needs to commu- nicate with another process, in order to fulfill its goal. for example, the simple action of
